What to do when your computer running ubuntu freezes?

15 June, 2013 • Mansoor A • 2 min read

This is what you can do when your Ubuntu freezes

There are different types of freezing, from a single program stops responding, to the entire system lock up. I will try to address them one by one.

A single program stops responding

This is the most common one. This happens very often. And this can be dealt easily.

When a single window stops responding, you can simply click the close button in the
window and chances are it will give you an option to force close it.

But, sometimes it does not. In that case, press `Alt+F2` and type `xkill` and press enter.

The mouse pointer will turn into an `x`. Now, if you left click on any
